PART A - EXPLANATORY NOTES PURSUANT TO MFRS 134**As at 31 March 2016 (Continued)****A17. FAIR VALUE OF FINANCIAL INSTRUMENTS**

The methods and assumptions used to determine the fair value of the following classes of financial assets and liabilities are as follows:

a) Cash and cash equivalents, trade and other receivables and payables

The carrying amounts of cash and cash equivalents, trade and other receivables and payables are reasonable approximation of fair values due to short term nature of these financial instruments.

b) Borrowings

The carrying amounts of the current portion of borrowings are reasonable approximation of fair values due to the insignificant impact of discounting. The carrying amount of long term floating rate loans approximates their fair value as the loans will be re-priced to market interest rate on or near reporting date.

When measuring fair value of an asset or a liability, the Group uses observable market data as far as possible. Fair values are categorised into different levels in a fair value hierarchy based on the input used in valuation techniques as follows:

- Level 1 – Quoted prices quoted prices (unadjusted) in active markets for identifiable assets or liabilities.
- Level 2 - inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly(i.e. prices) or indirectly (i.e. derived from prices).
- Level 3 – inputs for the asset or liability that are not based on observable market data (unobservable input).
